Experience

CO-FOUNDER & SOFTWARE DEVELOPER

March 2024 - Present

ADINI - Software Development Studio

- Co-founded a software development studio delivering custom web and mobile solutions for clients. Led functional analysis, software design, development, deployment, and infrastructure alongside the team.
- Designed and developed enterprise resource planning (ERP) systems, administrative platforms, and mobile applications, integrating payment gateways, subscriptions, real-time notifications, and admin dashboards.
- Implemented infrastructure and deployment automation using Docker, GitHub Actions (CI/CD), Linux servers, reverse proxies, and cloud services, managing development and production environments.
- Collaborated with clients on requirements gathering, technical solution definition, and project planning, supporting the full software development lifecycle.

SOFTWARE DEVELOPER

February 2024 - Present

Universidad Tecnológica Nacional

- Designed and implemented software solutions for Universidad Tecnológica Nacional, taking part in the full development lifecycle of web, mobile, and microservice applications.
- Centralized user, microservice, and API authentication and authorization through Keycloak, managing SSO, OAuth2/OpenID Connect, JWT, Client Credentials, and role and permission models.
- Developed Generative AI solutions using RAG, semantic search over vector databases, and tool calling to query institutional information in real time.
- Optimized email and notification delivery through asynchronous job queues with BullMQ and Redis, improving scalability and performance.
- Integrated institutional systems and external services, including LDAP, SIU Guaraní, and REST APIs, ensuring secure and consistent information exchange.

FUNCTIONAL ANALYST

April 2023 - January 2024

Universidad Tecnológica Nacional

- Gathered and analyzed functional requirements together with clients and users, translating business needs into technical specifications.
- Produced user stories, use cases, and UML diagrams to define features and guide software development.
- Collaborated with development teams on the functional validation of solutions throughout the entire project lifecycle.
- Executed functional testing (QA), identifying issues and verifying requirement compliance before each delivery.

Education

Higher Technical Degree in Web Development

Universidad de la Matanza

April 2021 - **Present**

Primary and Secondary School Diploma

Macnab Bernal School

January 2004 - November 2018

Certifications

Docker and Kubernetes

July 2024 - September 2024

Bootcamp Credencial UTN

January 2024 - March 2024

Web Development with React

August 2023 - November 2023

Database Management Diploma

August 2023 - October 2023

Web Development with JavaScript

April 2023 - June 2023

Full Stack Web Development

November 2022 - May 2023

Fundamentals of Databases

August 2022 - September 2022

Diploma in Advanced English Studies

January 2009 - December 2017

Skills

Technologies: HTML, CSS, JavaScript, TypeScript, React, Next.js, React Native, Expo, Redux, Tailwind, Bootstrap, Node.js, Express, SQL, MongoDB, Docker, Git, GitHub Actions, AWS.

Language: Spanish (Native), English (Upper-Intermediate – B2).

Relevant Projects

Credencial UTN - Digital Credential Mobile Application with AI Chat

November 2025 – April 2026

Student-oriented mobile digital credential application for a university environment. Implemented an AI-powered conversational assistant using RAG architecture to answer academic queries through semantic search and tool calling. The application enables student identity validation, access to academic information, enrolled courses, academic history, and class schedules.

Moviltrack - Enterprise Management System

April 2025 - October 2025

ERP-style web application for managing business operations, including customers, suppliers, products, services, projects, quotations, purchase orders, and recurring billing. Implemented dynamic PDF document generation, automated recurring payments, Drag & Drop quotation creation, and analytical dashboards.

Diffusions - Bulk Email Sending Microservice

January 2025 - April 2025

Microservice for a university portal focused on large-scale email delivery. Implemented an asynchronous processing system using job queues with Redis and BullMQ, enabling efficient and scalable handling of high-volume email campaigns. Included recipient list management, delivery status monitoring, open tracking, rich text editing, and file attachment support.
